

WhizEats Pro — Mobile QA Test Report

Comprehensive Mobile POS & Kitchen Display System (KDS) Quality Audit

Target Device: Google Pixel 10 (ARM64 Emulator)	Platform / OS: Android 17 (API 37)	Build Version: 1.0.2.1 Debug
Resolution / Density: 1080 x 2424 px (420 dpi)	Package: com.whizeats.pro	Evaluation Verdict: CONDITIONAL PASS

1. Executive Summary & Verification Scope

This quality assurance report documents the end-to-end testing cycle performed on the **WhizEats Pro** mobile restaurant POS application on an Android ARM64 emulator simulating the **Google Pixel 10**. Testing evaluated core functional pathways, UI/UX consistency, usability, role-based workflows (Waiter, Kitchen / KDS, and Runner/Pass), accessibility touch targets, and backend REST API synchronization. Overall core order-taking and kitchen workflows are robust; however, **8 actionable defects**—including a **critical visual inconsistency in confirmation dialogs (Glassmorphic vs legacy Material)** and a **raw backend error display bug ('No Data')**—require engineering attention prior to production release.

Test Suite Metrics	Count	Percentage / Assessment
Total Test Scenarios Executed	35	100.0%
Test Scenarios Passed	27	77.1%
Identified Defects / Bugs	8	22.9%
High Severity Issues (P1/P2)	2	Dialog Inconsistency, Raw Error Banner
Medium Severity Issues (P2/P3)	2	Bottom Grid Clipping, Unlabelled Icons
Low / Usability Issues (P3/P4)	4	Legal Hitbox, Redundant Nav, Splash Icon, Search Clear

2. Design Consistency & Glassmorphism Audit

Critical Finding: WhizEats Pro features a sleek, premium glassmorphism aesthetic across its primary drawers and dashboard headers (utilizing BackdropFilter with blur sigma 18 and semi-translucent white cards). However, modal and dialog components diverge significantly across screens:

- **Hamburger Drawer Sign Out:** Renders a modern custom glassmorphic modal with blurred background, rounded corners (radius 24), circular red exit icon badge, centered bold typography, and stylized action buttons.
- **Profile Screen Sign Out:** Renders a default Android Material AlertDialog with flat opaque white background, hard rectangular borders, inline left-aligned icon, and unstyled text buttons.
- **Recommendation:** Unify all confirmation dialogs into a shared component GlassmorphicConfirmDialog to deliver a 100% consistent, brand-cohesive experience.

3. QA Defect & Issue Tracker

Detailed record of all identified functional, UI, UX, usability, and accessibility defects.

ID & Feature	Type & Severity	Steps & Actual vs Expected Result	QA Recommendations
BUG-01 Sign Out Dialog Drawer vs Profile	High / P2 UI / UX Inconsistency	Steps: Compare Sign Out dialog from Hamburger Drawer with Logout dialog in ProfileView. Expected: Both dialogs use the same custom glassmorphic aesthetic. Actual: Profile screen displays legacy flat Material AlertDialog.	Refactor ProfileView._showSignOutDialog to use the shared Glassmorphic confirmation modal.
BUG-02 Login Screen Error Handling	High / P2 Functional / UX	Steps: Enter invalid username/password and tap Login. Expected: 'Invalid username or password. Please verify credentials.' Actual: Error banner literally displays 'No Data' directly from API response.	Map backend status 'No Data' / 401 in AuthProvider to a friendly error string.
BUG-03 Tables Dashboard Grid Layout	Medium / P2 UI / Layout	Steps: Scroll to bottom of tables grid (Table 7 / Table 49). Expected: Full table card and status pill visible with comfortable padding. Actual: 'AVAILABLE' status badge is partially clipped behind floating bottom bar.	Add padding: EdgeInsets.only(bottom: 110) to GridView.builder in waiter_dashboard_view.dart.
BUG-04 Login Form Legal Disclaimer	Low / P3 UX / Accessibility	Steps: Attempt to tap 'Privacy Policy' on mobile width (1080x2424). Expected: Responsive link opens external URL in Chrome tab. Actual: Multi-line wrap splits 'Privacy' and 'Policy', causing center taps to miss recognizer.	Use distinct interactive chips or a Wrap widget with min 48x48dp touch targets.
BUG-05 Tables Dashboard Cart Navigation	Low / P3 UX / Information Arch.	Steps: Inspect top right header and bottom navigation bar. Expected: Single clear entry point to Cart or contextual badge differentiation. Actual: Both top header icon and bottom nav tab navigate to Cart with no distinction.	Consolidate Cart into bottom navigation bar or provide unread item badge in header.
BUG-06 Header Controls Accessibility	Medium / P3 Accessibility (a11y)	Steps: Inspect Hamburger buttons in Waiter and KDS headers with Screen Reader. Expected: Spoken description: 'Open navigation drawer'. Actual: content-desc="" flags NAF; TalkBack reads 'Unlabelled button'.	Add tooltip and Semantics(label: 'Open Navigation Drawer', button: true) to all icon buttons.
BUG-07 App Launch Splash Screen	Low / P3 UI / Branding	Steps: Cold start app from home screen and observe splash transition. Expected: Seamless transition using consistent WhizEats brand icon. Actual: Native launch displays silver chef hat, which jumps to purple gradient icon in Flutter.	Update launch_background.xml with the current gradient logo asset.
BUG-08 Menu Screen Search Field	Low / P4 Usability / UX	Steps: Type query in 'Search dishes...' field on active table menu. Expected: Trailing 'X' icon appears to clear input in one tap. Actual: No clear button; user must press keyboard backspace repeatedly.	Add suffixIcon: IconButton(icon: Icon(Icons.clear), onPressed: () => controller.clear()).

4. Visual Evidence & Module Walkthrough

High-resolution screen captures from Google Pixel 10 emulator verification runs.

Module 1: Splash Screen & Login Authentication Verification

Fig 1.1: Animated Splash with Hourglass & Progress Indicator

Fig 1.2: Modern Login Screen with Legal Agreement Checkbox

Fig 1.3: Form Field Validation on Empty Submission

Module 2: Waiter's Tables Dashboard & Order Allocation Flow

Fig 2.1: Tables Grid with Available & Occupied Status Badges

Fig 2.2: New Party Size Configuration (Adults & Children Steppers)

Fig 2.3: Table 1 Status Transitioned to OCCUPIED with Red Border

Module 3: Menu Ordering Mode & Cart View

Fig 3.1: Menu Screen (Table 1 Active Order, Search & Veg Filters)

Fig 3.2: Cart Screen Header (Table 1 Main Hall) & Empty State

Fig 3.3: Waiter Glassmorphic Drawer with Quick Actions & Version

Module 4: Kitchen Display System (KDS) Flow

Fig 4.1: KDS Screen - 'All' Active Orders View & Empty State

Fig 4.2: KDS Screen - 'Queue' Tab with Dynamic Red Pill Badge

Fig 4.3: Kitchen Status Filter Dialog (All, Pending, Prep, Serve)

Module 5: Sign Out Dialog Visual Inconsistency Comparison

Fig 5.1: Waiter Drawer Sign Out — Custom Glassmorphic Modal

Fig 5.2: Profile Screen Sign Out — Stock Material AlertDialog (DEFECT)

Fig 5.3: KDS Drawer Sign Out — Custom Glassmorphic Modal

5. QA Conclusion & Next Steps

Summary Assessment: The tested modules—Splash Screen, Authentication, Legal Integration, Main Waiter's Tables Dashboard, Menu Screen, Cart Screen, Sign Out Flow, and Kitchen Display System (KDS)—demonstrate high architectural stability, responsive Flutter rendering, and flawless session cleanup upon logout. Addressing the **8 reported defects**—principally homogenizing modal dialogs into the established glassmorphic design system, adding bottom grid padding, and translating the raw 'No Data' error banner—will ensure a flawless, enterprise-grade user experience for restaurant service staff.
